# ESD Campus Asia Pacific 2022

## *Course Information:*

### Undergraduate Course

#### ESD Campus Asia Pacific Program I (HYFLEX):

This course provides the latest knowledge regarding Education for Sustainable Development (ESD) and considers what is required for current educational attempt to confront the world crisis in terms of holistic dialogues with the participants from each country. The topic 2022 will focus on “Addressing the Global Goals via Local and Regional collaborations” . We will think about “sustainable community design” through lectures and group work.

### Graduate Course

#### ESD Camus Asia Pacific Program II (HYFLEX):

This course provides Internship Program of ‘Global Education for Sustainable Development Initiatives’ and has an aim to produce global ESD-leaders to pursue current educational attempt to confront the world crisis through holistic dialogues with participants from each country. The topic 2022 will focus on the research on Indigenous education. Since the United Nations officially declared the rights of indigenous peoples in the late 2000s, various debates have been held in each country and region over the history of indigenous peoples and their representations. In addition, recent research ethics trends have led to the questions, what contributions will be brought to the Indigenous communities.
